

George F. Hagner

June 6, 1949 - September 2, 2024

In memory Of Dr. George F. Hagner:

One my earliest toys was a metal box with knobs and switches on it, that my Dad had made. I later learned when I was baby I had messed up an experiment he was doing by playing with the knobs and switches on machine, so to keep that from happening again he made a toy to keep me occupied.

My Dad got a PhD in physics and went into business engineering doing such things as hearing aid manufacturing for a number of years.

He had always liked teaching, so he started teaching online as a part time job which became more of a full time job as the economy took a hit.

He taught many students who went on to get degrees through his online classes and then he began teaching at the VoTech here in Muskogee

Unfortunately, soon after he began teaching my mother became ill and died, and a few years later my sister was lost as well.

My Dad's health also began to decline but he kept going doing his best till the end.

He was a loving Father to me and my sister and a loving husband to my Mom.
